OPENSUSE.ASIA ONLINE SUMMIT 2022 LOGO DESIGN

NIKITA TRIPATHI

SCROLL

Concept

The venue of Open SUSE Asia summit 2022 is: online/ Indonesia, as per the official website. I noticed that all other venues previously were <City/Country> so I asked Douglas DeMaio about it and I was informed that 'Indonesia' is just added since it lies in the mid time zone of Asia because there was no option to put 'Venueless' in the country option.

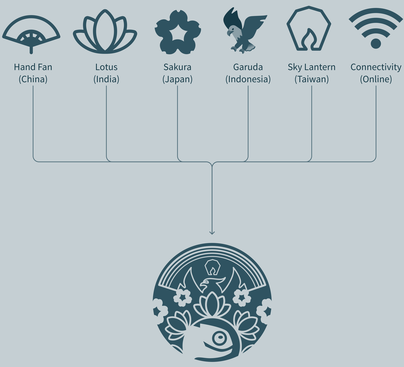
Viewing the previous years submissions and cumulating observations, I noticed the most important elements in all the logos were:

- The logo should clearly voice Asia
- The SUSE logo should however be in focus

Approach

I tried to combine some of the cultures of Asia: Chinese, Indian, Japanese, Indonesian and Taiwanese.

Combining Themes



Mandala Art logo

Final Logo

The final logo is completely monochromatic for ease of usage and application. I used Inkscape to create it.

Philosophy

ART

I chose Mandala Art, since it is a geometric design or pattern which is balanced. It typically consists of concentric patterns with point of origin not necessarily being in the center of the frame.

SHAPE

The art lies withing a Circle as it appropriately frames the entire concentric pattern and highlights the point of origin as the openSUSE logo.

ELEMENTS

- openSUSE LOGO
  The openSUSE logo lies at the heart of the Mandala pattern and creates a subtle focus on it. It is lightly framed inside a circular rim to separate its identity from the rest of the patterns.
- LOTUS
  The inner circle is adorned with Lotuses which is the national flower of India
- SAKURA
  The Sakura flowers are also known as the Japanese cherry, are one of the most popular spring trees of Japan
- GARUDA
  The Garuda (Eagle) is the national emblem of Indonesia and it is shown holding the hand fan with its wingspan
- HAND FAN
  The hand fan, being popularly used to symbolise China, crowns the top of the artwork
- SKY LANTERN
  There is a small septagon with a flame in the middle on the hand fan to signify a sky lantern. It is one of the celebrations popularly associated with Taiwan and Thailand
- CONNECTIVITY
  A ripple-like pattern towards the outer half of the hand fan is made to represent Wi-fi: something everyone will use to connect to the virtual summit.

DESIGN ASPECTS

- SYMMETRY
  Due to the SUSE logo causing asymmetry in the overall design, the small lotus petal on the left bottom is made a bit larger for visual symmetry
- BALANCE
  The final design is kept simple with balanced negative spaces to create less noise.
- ORIENTATION
  One of the initial iterations had the entire logo rotated clockwise at 90 degrees since in that orientation SUSE logo looked symmetrical, but for the sake of improvement, it was changed
- PERSPECTIVE
  The varying widths and the alignment of the sakura cause a subtle one point perspective in the design and give it a depth

About The Designer

Hello!

I am Nikita Tripathi, the current Outreachy intern (May-Aug 2022) at Fedora for the Badges Design Project.
